# Program Exercise #1 (1)

- Demo date: Sep. 18 (Tue.) 23:59 p.m.
- TA: 詹祐維、黃定銳
- Reading Assignment: Chapter 2.1, 2.3-2.7
- Software: Dev-C++
- Submission:
  - Filename format:

```
學號_programNo.c
```

例如: M06455505\_program1-1.c

- In-class demo (Sep. 19 Wed. 9:10-12:00 a.m.)
- iLearn 2.0 submission
  - \*用自己的學號建立資料夾,並將 source code 放入資料夾,壓縮上傳 iLearn 2.0

# Program Exercise #1 (2)

## Grading:

- Correctness 50%

Program structure 20%

- Comments 10%

Header block5%

Variable dictionary 10%

Procedures and functions 5%

## • Special notice:

- 請勿抄襲別人程式(助教會當場進行測問、判定),或是遲交作業,否則一律 0分計算
- 請一律使用 C 語言來撰寫程式,且必須保證你的程式能夠再 Dev-C++ 軟體上成功編譯與執行,使用其他程式語言一律不予計分
- 請依照題目給的輸入格式,否則不計分
- 本次作業有三個子題目,個別配分分別佔30%,30%,40%

# Program Exercise #1 (3)

• Problem 1-1 (30%):

P.17, #8: Write both a recursive and an iterative C function to compute Fibonacci numbers.

\_\_\_\_\_

#### Definition:

$$F(i) = \begin{cases} 0, & \text{if } n = 0 \\ 1, & \text{if } n = 1 \\ F(n-1) + F(n-2), & \text{if } n > 1 \end{cases}$$

### Basic requirements:

輸入:要求使用者輸入n值,其中n要至少為2,否則印出Error!,並且要求使用者重新輸入

輸出:在螢幕上顯示F(n)的值,並要求使用者輸入下一個n,直到使用者輸入非數字字元才

結束程式

#### Example:

$$% > n = 3$$

$$%> n = 1$$

#### Output:

$$\%$$
 > F(3) (iter.) = 2

$$\% > F(3) (recur.) = 2$$

# Program Exercise #1 (4)

• Problem 1-2 (30%):

P.17, #:10: Write a recursive function to compute Ackerman's function A(m, n).

\_\_\_\_\_\_

Definition:

$$A(i,j) = \begin{cases} j+1, & i=0 \\ A(i-1,1), & i>0 \text{ and } j=0 \\ A(i-1,A(i,j-1)), & i,j>0 \end{cases}$$

Basic requirements:

輸入:要求使用者輸入i,j值,

輸出: 在螢幕上顯示A(i,j)的值,並要求使用者輸入下一個 i,j,直到使用者輸入非數字字元才結束程式

Example:

Input:

$$\% > i = 2$$

$$\% > j = 2$$

Output:

$$\% > A(2,2) = 7$$

# Program Exercise #1 (5)

• Problems 1-3 (40%):

Write a recursive function to find the maximum value in a series of number.

\_\_\_\_\_

#### Definition:

- (1) define a function: int max(int x, int y), and return the maximum value from these two numbers.
- (2) recursively call the function: int arraymax(int a[], int n) to get the maximum value from the given input array A.

### Basic requirements:

Input: given a series of number: A[8 6 1 17 16 23 9 9], separated by space.

Output: return the maximum number in the array A.

### Example:

### Input:

%> Input array: 8 6 1 17 16 23 9 9

### Output:

% > 23
